## About "AICHECK"

AiCheck is an app that, using Artificial Intelligence, is capable of checking the authenticity of a pair of shoes comparing the product with: the project of the shoes and other shoes from the users of the app. The control is based on the images loaded by the user, following the instruction given.

## Why us?

Our project was born for those who buy online, from platforms like vinted/wallop/restock ecc.ecc. to have the certainty that the product they are buying is original, and not a scam.

Using the AI, the app would guaranty: high performance, short response time and the capacity to refine the parameters of checking.
