

B-PASE

«LESS PLASTIC
MORE HEARTBEAT»

BIO-PLASTIC FROM ALGAE FOR SUSTAINABILITY ENVIRONMENT

For large food producers who want to replace or minimize the use of plastic containers, B-Pase is an Italian company that produce bioplastic, compostable, biodegradable and eco-sustainable food packaging. Unlike food packaging already on the market, our product is developed from an innovative material, the green algae "Ulva lactuca".

GOALS:

- Produce and Supply bio-friendly packaging
- Create a new PLA using the green algae
- Small local companies on commission
- Reduce overproduction and global pollution

The **final goal** that we want to fullfill:

inspire other companies and clean the environment
