

# C-PLASTER

New green building material from coffee ground

## ABSTRACT

The project is born from an environmental analysis conducted on two sectors: construction and food industry, in particular on building materials and coffee production. The idea is to realize an innovative mixture by reusing roaster's waste, to produce ecofriendly plaster with advanced and enhanced performances.

## GOALS

- To reuse waste and reduce raw materials consumption
- To reduce emissions and energy consumption
- To produce innovative, sustainable, cost-effective and high-performance building materials
