Abstract

Taking into account the Covid emergency and the various lockdowns, healty food and fresh air are becoming two of the most urgent needs, especially in big cities.

If you come from a small town in the countryside, it is not rare to own fruit trees and give away some extra fruits or vegetables to your neighbours.

This has inspired us to create **Neighbour Food**, an app/web site that gives you the opportunity of renting a tree out of town, having your own km0 food products for free and selling the excess!

Finally, customers will have the chance to visit the orchard anytime and reconnect with nature, relax and slow down his pace of life for a bit.
