## **THE SELF-HEATING CONTAINER NEW WAY OF EATING**

**Reference lecturer: Professor Raffaele Zanolli**

The idea is to present a portable, self-heating container to heat your meal without compromising your health and the environment. This product was ideate in order to meet the needs of our target, like humanitarian organizations and private consumer. The scope is to heat just by using water and a special powder, inside of a particular box. The mechanism works through an exergonic reaction, to solve the problem of the absence of a heating source and the increasingly limited time.

Be ready to not use anymore electricity!
