

ZERO FIELDS

Kevin Di Leo
Julian Gostoli
Joan Kanakciu

Zero Fields offers an indoor EMF monitoring station aimed at manufacturing companies. The structure is compact and suitable for all industrial situations; collected data can be viewed via an extremely user-friendly PC and mobile application.

The idea stems from the desire to solve problems related to the impact of electromagnetic fields on workers, a highly debated issue characterized by the presence of very stringent regulations regarding exposure levels; therefore, continuous and truthful measurements are necessary also to avoid heavy penalties against employers.
